

Stock Management

More than just managing stock levels, Merlin can control your product range, locations, families, groups, suppliers, batches, shelf life, consignment stock and can be set-up for full traceability.

Stock Record

Key Features ...

Stock Take

Define particular aisle, groups, bins etc. and streamline your stock check process.

Returns

One process to send the returns form to the customer and book the goods back in.

Stock Status

Real-time information of stock levels and whether the item is active or redundant.

Meet customer demand

Optimise stock levels to meet demand, without overstocking.

Ecommerce

One stock file feeds your in house sales functions and your website - see the Web Services Tool Set for more information.

Slow Movers

Proactively identify stock becoming slow movers and offer discounts before they become redundant.

Optimise Stock Investment

HIGH AVAILABILITY - Sophisticated stockholding and sourcing means you can readily fulfil customer demand.

AVOID OVERSTOCKS - Prevent dead money from sitting on the shelf by more accurately predicting demand.

RANGE MANAGEMENT - Fine tune your product catalogue using data from multiple suppliers.

MINIMISE SLOW MOVERS - Stay ahead of the curve and optimise your stocking levels by easily identifying trends.

SUPPLY CHAIN - Easily action, track and update stock movements between suppliers, depots, locations and customers.

Multi depots and locations

- **Multi-depot** - Maximise stock utilisation over unlimited branches and warehouses including consignment stocks.
- **Multi-bin** - Speed-up dispatch by picking in bin order, with the option to consolidate pick lists.
- **Barcoding** - Reduce receipting, picking, dispatching and stock checking errors by accurately scanning stock movements.
- **Inter-branch transfers** - On demand or replenishment, triggered by minimum and maximum stocking levels.

Full traceability and batches

Merlin offers traceability at batch and/or item level (Serial number) and can accommodate Test Certificates and Certificates of Conformity.

A single database

IMPROVE EFFICIENCY WITH SINGLE DATA CAPTURE

A single, highly efficient SQL database of product records used for all input and output, linked to all methods of trading with all stock movements recorded and archived.

Sourcing

- **Manufacture** - Merlin's optional production control allows you to create BOMs - made-to-order or for stock.
- **Assemble** - Create or amend Kits - assemble to order or for stock.
- **Purchase** - From a range of suppliers with the option of EDI.

Analysis

Real-time data outputted to the Dashboard, Reports and/or Microsoft Excel.
